

Company Profile

ALPINE INDUSTRIES is a leading Manufacturer of Personal Protective Equipment (PPE) and high quality safety products.

Our all products are being manufactured in our factory under supervision of talented experienced quality inspection officers.

The main key factor of our quality is direct access to Tanneries in our own factory where we can get the best quality Leathers produced for our production programs so that is why we are on the top for various fine Quality Leather Products as we have depth knowledge and sources from Raw Skins to finished Leathers. We have also established the R&D (Research and Development) department, which is preparing the latest designs for customers by using modernization. The company goodwill and competitive advantage is also being enhanced by keeping in view the **KSF** (Key Success Factors) of the industry (like Desired Quality, Aggressive Price and Fast Delivery etc.)

Our highly skilled craftsman and dedicated staff are working with great endeavor in order to win optimal satisfactions of our customers. We also want you to understand that every time you choose a pair of gloves from our company, you are buying a carefully tested product, which uses all the latest technology. We ensure your comfortless and safeness as possible as we can in your working environment. We are also improving our customer services & warehousing. When you place an order with us, you can be sure that a delivery will arrive in time. If you write or send us email or a phone call, you will always get quick response to every question. We are ready to provide you all kinds of services as per your satisfaction.

Our vision:

Excellence in service, quality, value and product innovation is important to us. We take pride in our products and our service. If you have a problem, we will do everything in our power to fix it. We care and the Armour Safety team are committed to doing our best.

Quality & Value:

In an industry where you are 'spoiled for choice' in safety equipment, some customers choose products based on price rather than quality. Discerning customers know the purchase price doesn't take into account cycle rates or the cost of replacements over time. Price is not always the best way to select safety gear. Alpine Industries sources the best grades of raw materials to ensure our products last longer while still remaining cost competitive. We focus on improving value for your PPE spend and help you to reduce the total cost over time by supplying better, not cheaper, safety gear.

Service:

On Time Deliveries, is our Passion.

We respond to customer enquiries quickly and our goal is to lead the industry in customer service. The Alpine Industries team goes out of our way to find you the product solutions you need. offered free samples so that you can experience each product's performance before committing.

Accuracy:

Not only do we strive to ensure orders are accurate and delivered on time, but we also aim to provide precise information. As a Manufacturer, many of our customers look to us for guidance and safety product solutions, so everything we advise must be certain. We acknowledge this and offer the best in what we do — every day.

Innovation:

We love to innovate and design new products — that's our unique point of difference. Designing solutions and products to meet our customers' requirements gives us great satisfaction. Our access to many international PPE supply companies allows us to create new and improved products upon request. We listen, we are flexible, and we love innovation! Ask us about our innovation track record.

Compliance:

All Alpine Industries products meet stringent safety compliance requirements — that's what is expected. Our job is to ensure your workers are protected in the many environments that they operate.
